## SMEC to Assess Electricity Generation in Sierra Leone

22 March 2017

SMEC has been engaged to undertake an Assessment and Business Planning Activity for the Electricity Generation and Transmission Company (EGTC) in Sierra Leone, by the Millennium Challenge Coordinating Unit, funded by the Millennium Challenge Corporation.

The overall objective is to strengthen corporate governance at EGTC and EDSA (Electricity Supply and Distribution Authority), conduct an organisational assessment of EGTC, develop a strategic plan for EGTC, and develop requirements for a training program and business systems to strengthen EGTC's operations.

SMEC will conduct an assessment of EGTC's ability to meet current and future responsibilities in the reformed power sector and develop a business plan and utility transformation program to support EGTC development.

The project comprises: defining and implementing a training program for the EGTC and EDSA Boards of Directors; evaluating the institutional structure, professional requirements and training needs for EGTC as an independent generation and transmission service provider in Sierra Leone; and drafting a business plan and evaluating business systems, information technology platforms, professional development and equipment needs to serve the strategic objectives defined in the EGTC business plan.
