SMEC Awarded Major Road Upgrade Project in Samoa

13 January 2016

SMEC, in association with Meredith Sam Manuel Ltd, has been awarded a contract by the Land Transport Authority of Samoa to provide surveys, investigations, design and documentation for the 20 km Central Cross Island Road (CCIR) Upgrade - Enhanced Road Access Project (ERAP) on Upolu Island in Samoa.

The CCIR is a major economic corridor on Upolu Island, and is one of several roads that sustained extensive damage during Tropical Cyclone Evan in December 2012. Funded by the World Bank and the Government of Australia, the objective of this project is to progressively upgrade the CCIR between Leufisa and Siumu in order to improve safety and efficiency for road users, and mitigate the impact of cyclone damage on affected residents.

SMEC’s services include: survey and site investigations; preliminary design; environmental and social assessments; a land acquisition and resettlement plan; a final design report; and preparation of draft and final bidding documentation.
