New contracts continue for SMEC in South America

01 April 2019

Five-year framework asset maintenance / Maintenance optimisation contracts
The largest copper producer in the world has awarded two contracts to SMEC in the last month.

The initial contract is a five-year asset maintenance framework contract where SMEC will support one of the client’s mine sites in the north of Chile. The scope of work comprises of a series of services ranging from maintenance strategies, maintenance plans development, maintainability studies and maintenance process improvements for one of the large concentrator plants. SMEC is pleased to return to this mine site after six years.

A second contract will see SMEC review and optimise the maintenance plans for the copper stripping machines at the client’s largest producing mine site over a four-month period. SMEC is currently assisting at seven of the client’s nine Chilean operations.

Planning support
SMEC has secured an initial three-month contract to support a leading copper producer at its open cut mine in northern Chile.

The scope of work includes long, medium and short-term planning activities for a concentrator plant. The key deliverables include planning and related activities, such as inventory requirements, analysis and contractor support. This contract has the potential to be extended up to 18 months.

SMEC is delighted to continue its relationship with this client since the successful completion of a maintenance strategy optimisation program in 2017.
