SMEC to Improve Sanitation Services in Ethiopia

04 October 2017

SMEC has been engaged by the Arba Minch Town Municipality in Ethiopia to provide consultancy engineering services to improve sanitation planning and capabilities.

This project is aimed at improving the public health and living conditions in Arba Minch, and is being delivered in accordance with the Monitoring and Evaluation Framework of the One WASH National Program of Ethiopia. This Program brings together four key government ministries and their related sectors to modernise the way water and sanitation services are delivered.

The project will engage relevant stakeholders in strategic and operational sanitation planning, as well as the delivery of these services within the sanitation service chain.
